

UK WATER UTILITIES

Safe Efficient Compliant

Who we are

Following the successful establishment of WPL in the water sector, we are now part of WCS Environmental Engineering (WCSEE) to expand our sector reach.

WCSEE forms part of Marlowe's water and air industry grouping that provides specialist services that ensure safety and regulatory compliance.

What we are known for

We provide water and wastewater technology applicable to a wide range of water utility contexts – from off-grid domestic dwellings to large – scale treatment plants.

We can overcome challenging situations with process technology that offers a flexible approach using modular and scalable designs.

Collaborate with clients

WCSEE offers whole process solutions that take a holistic approach to new and existing clients, from early-stage assessment through to after care and maintenance. We collaborate with our clients to deliver reliable, robust, and future-proofed systems.

WCSEE is an approved contract supplier for many of the UK's leading water utilities.

Meeting regulatory and sustainable goals

WCSEE technology keeps pace with changes in the water utility sector, offering solutions which allow water and wastewater plants to adapt to growing challenges such as population increases, flow capacity, and tighter effluent consents.

Company wide and in our supply chain, WCSEE is committed to reducing the environmental impact of our activities and believes in taking ownership and responsibility for ensuring earth's precious resources are used sustainably.

Trusted experts

We combine in-house expertise, products, and services to ensure your site remains fully operational and within environmental consent.

- **Tailored treatment technologies based on site specific needs:**
 - New build
 - Asset replacement
 - Refurbishment or repurpose
- **Hire fleet for emergency or planned refurbishment**
- **Support in meeting AMP 8 goals**
- **Laboratory testing and trials**
- **Specification design and off-site modular build**
- **Installation, commissioning and customer training support**
- **Spare part components and consumables**

Core process technologies

[Hybrid-SAF™ T3HP vessel - discover more](#)

[HiPAF system - discover more](#)

[Microscreen - discover more](#)

[Floccell XFM fines filters - discover more](#)

[Lamella separator - discover more](#)

[Conical tanks - discover more](#)

[Sand filter - discover more](#)

[Disc Filter - discover more](#)

Flexible options include:

- Skid mount and containerised
- Modular – stand alone and scalable
- Standardised and custom built
- Containment vessels – steel, concrete and GRP

Hire fleet

- Hired on a short or long-term basis
- Transported easily and installed quickly
- Mobile assets can stand alone or sit alongside existing processes
- Solutions can be tailored to help manage costs
- Can effectively deal with seasonal flows and loads
